Role - Full Stack Developer

Objective - The assignment would test full stack skills along with familiarity of data analytics.

Assignment

1. Create a screen where one can upload the Excel/CSV file containing orders.
2. Parse the excel. Do data wrangling and processing.
3. Show the output on screen along with an option to download a formatted Excel file.

The output is a summary table showing the product-line territory wise shipped quantity and sales value for the year 2004.

How to share your work?

1. Share the Git link. Additional points for hosted URL.
2. Also share a small write-up explaining your choice of technology stack and how you went about solving the problem. You can post this on internshala chat.
